

RELATIONSHIPS TO OTHER CLASSIFICATIONS

Kovalchik (1992c) described many of the plant associations in the MEADOW series in the draft classification for northeastern Washington. MEADOW associations and community types are described throughout North America. Classifications in and near the study area include those in eastern Washington, northern Idaho, and Montana (Crawford 2003; Hansen et al. 1988, 1995; Kovalchik 1992c); central and northeastern Oregon (Crowe and Clausnitzer 1997, Kovalchik 1987); and Idaho, Utah, and Nevada (Manning and Padgett 1995; Padgett et al. 1989; Youngblood et al. 1985a, 1985b).

U.S. DEPARTMENT OF THE INTERIOR, FISH AND WILDLIFE SERVICE WETLANDS CLASSIFICATION

Owing to its variability, the classification will vary according to the MEADOW plant association and flood regime. It is possible for individual associations to belong to different wetland classification classes, depending on the size of the water body and the flood regime. Most of the wettest associations belong to the system palustrine; class, emergent wetland; subclass, persistent; water regime, (nontidal) temporarily saturated to semipermanently flooded.

KEY TO THE MEADOW PLANT ASSOCIATIONS

1. Aquatic sites on the edges of lakes or ponds or in sluggish streams, usually with standing water for all or much of the growing season, potential vegetation with species such as NUPO, POTAM, POAM2, SCVA, SPARG, GLBO, EQFL, TYLA, ELPA, or PUPAM with combined canopy coverage of at least 25 percent or dominant **Go to "Key to the Aquatic Plant Associations" (p. 238)**
2. Potential vegetation dominated by sedge (*Carex* spp.) with combined canopy coverage of at least 25 percent or dominant and *Eriophorum* and *Eleocharis* spp. <25 percent **"Key to the Sedge Plant Associations" (below)**
3. Sedge species with a combined canopy coverage of <25 percent or not dominant **"Key to the Nonsedge Plant Associations" (below)**

Key to the Sedge (*Carex*) Plant Associations

1. Russet sedge (*Carex saxatilis*) ≥25 percent canopy coverage or dominant **Russet sedge (CASA2) association**
2. Saw-leaved sedge (*Carex scopulorum* var. *prionophylla*) ≥25 percent canopy coverage or dominant **Saw-leaved sedge (CASCP2) association**
3. Holm's sedge (*Carex scopulorum* var. *bracteosa*) ≥25 percent canopy coverage or dominant **Holm's sedge (CASC2) association**
4. Showy sedge (*Carex spectabilis*) ≥25 percent canopy coverage or dominant **Showy sedge (CASP) association**
5. Sheep sedge (*Carex illota*) ≥25 percent canopy coverage or dominant **Sheep sedge (CAIL) association**
6. Black alpine sedge (*Carex nigricans*) ≥25 percent canopy coverage or dominant (plots with hidden, minute, Ericaceous shrubs should stay here) **Black alpine sedge (CANI2) association**
7. Cusick's sedge (*Carex cusickii*) ≥25 percent canopy coverage or dominant **Cusick's sedge (CACU2) association**
8. Beaked sedge (*Carex rostrata*) ≥25 percent canopy coverage or dominant **Beaked sedge (CARO2) association**
9. Bladder sedge (*Carex utriculata*) and/or awned sedge (*Carex atherodes*) ≥25 percent canopy coverage or dominant **Bladder sedge (CAUT) association**
10. Inflated sedge (*Carex vesicaria*) ≥25 percent canopy coverage or dominant **Inflated sedge (CAVE) association**

Legend

- WB Wetland Boundary
- DHSC Drumheller Springs Creek
- Type N Intermittent/Seasonal Creek
- WMA Wetland Mitigation Area
- PEM1C Palustrine Emergent Persistent Seasonally Flooded
- PDA Private Drive Approach

Notes:

F1 The instream gradient at the springs was 29% and then 51% top of terrace along Ash Drive.

F2 There is a nonpermitted private drive approach which has damaged and impacted the WU-3 Vernal Pool Wet Meadow.

There are native wetland plant species including Common Camas, Bitterroot, Biscuitroot, Indian Celery, Wild Onion, 25014-2107-2109, and Lomatium nudicaule on these 3 parcels and are also considered Vernal pools based on special characteristics.

DISCLAIMER: This report includes information that the Washington Department of Fish and Wildlife (WDFW) maintains in a central computer database. It is not an attempt to provide you with an official agency response as to the impacts of your project on fish and wildlife. This information only documents the location of fish and wildlife resources to the best of our knowledge. It is not a complete inventory and it is important to note that fish and wildlife resources may occur in areas not currently known to WDFW biologists, or in areas for which comprehensive surveys have not been conducted. Site specific surveys are frequently necessary to rule out the presence of priority resources. Locations of fish and wildlife resources are subject to variation caused by disturbance, changes in season and weather, and other factors. WDFW does not recommend using reports more than six months old.
